Reduce Institutional Risk With Targeted Safety Training for Students

The news coming out of colleges and universities can be alarming: Serious cases of lab-acquired infections. A student catastrophically injured in a machine shop. The death of a grad student working with pyrophoric chemicals. Criminal charges and lawsuits following such incidents.

Higher education institutions must be cognizant of the risks faced by undergraduate and graduate students in facilities across campus – from labs to machine shops, theaters, kitchens, art studios, and more. BioRAFT's Student Safety Training Module helps you mitigate those risks by providing specific safety training for individual students in an easy-to-manage, web-based format.

Key Benefits

Protect Students at Risk

Students often lack experience in lab and shop safety. BioRAFT makes it easy to add large student populations to your safety training program by integrating with your institution's course registration system.

Ensure Consistent Training

Eliminate inconsistencies that occur when different professors and teaching assistants deliver safety training. With BioRAFT, you control the content and compliance with training protocols.

Analyze Training Insights

BioRAFT's training dashboards and reports help TAs, instructors, and department chairs identify which individuals, courses, and departments are doing well with fulfilling training requirements and which need attention.

Avoid the Add/Drop Headache

Keeping track of training completion as students join and leave classes is challenging without an automated system. With BioRAFT, the connection to your institution's registration system ensures students' training requirements stay aligned with the courses in which they are registered.

Deliver the Right Training

Make sure each student gets the training they need. BioRAFT's training assignment rules automatically assign training requirements to students based on the classes they're taking. The module automatically manages adds and drops as the semester continues.

Drive Training Compliance

Students who don't understand their training requirements are less likely to participate in safety programs. When students log into BioRAFT, they immediately see an easy-to-understand list of requirements and can launch the training from the same screen.

Save Time and Resources

Chasing down students to take their required training can be time-consuming and frustrating. BioRAFT automatically notifies students of new training requirements and sends regular reminders.

Increase Productivity. Accelerate Your Return On Investment.

When it comes to research, speed wins. Researchers want to complete their health and safety tasks quickly and efficiently so they can spend more time on the research they love.

Download the [Researcher Productivity Survey](#) to learn more about:

- Lowering administrative burden
- Principal investigator cost savings
- Researcher time savings on common safety and compliance tasks
- Annual cost savings for inspections

Must-Have Features

Integrates with your course registration system

Triggers training for courses with lab components

Determines training requirements by course type

Clearly displays training students must complete

Generates reports showing registration and training compliance

Provides automated reminders of training requirements

If Managing Safety Feels Too Hard, It Probably Is.

Let us show you in 15 minutes how BioRAFT can make your job less of a burden.

Let's Talk

A Scalable Modular Solution

The BioRAFT platform provides a stable foundation on which your institution can grow. This platform approach reduces dependence on piecemeal systems and cumbersome manual methods, greatly improving the efficiency of scientists and safety teams.

The platform evolves as we work collaboratively with customers to develop new functionality. When your institution's needs grow, new capabilities can be gained by implementing additional modules.

Integrated Platform

Reduce total operational costs with a single, easy-to-use system that improves laboratory safety and increases efficiency.

Training Delivery & Management

Offer a comprehensive health and safety training program with user-specific assignments, automated requirements, and reminders.

ChemTracker

Manage chemical inventory with a robust chemical database, and generate complex regulatory reports with ease.

Inspections & Audits

Assign, conduct, and review inspections and self-inspections based on hazard and risk criteria, which drive real-time data-analysis dashboards.

Asset & Equipment Management

Track and manage your institution's research equipment and assets, including users, locations, certifications, and more.

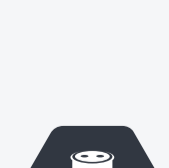

Safety Data Sheet (SDS)

Search and view a comprehensive library of over 1 million unique SDSs.

Biosafety & Registration Committee

Streamline the biosafety registration process, from project and materials submission to committee review, for all parties involved.

Hazardous Waste Pickup

Streamline the process of requesting waste pickup, from the lab to health and safety, while retaining lab-specific data.

Radioisotope Management

Manage a complete radioisotope program, from broad scope license limits to authorized user registrations and cradle-to-grave reporting.

Occupational Health & Risk Assessment

Identify, review, and track users who are potentially exposed to animal allergens, and survey for their exposure levels and potential health impacts.

Student Lab Safety Training

Confidently manage laboratory and shop safety training for your undergraduate student population and prepare them for careers in research.

Facilities Management

Safety isn't limited to the lab. Ensure your organization's entire staff receives the proper training necessary to maintain safety and protect revenue.
